For Verification

For Liveness JS

For Fingerprint

To get **fingerprint** you need to do a local request to your fingerprint scanner device. This is not part of the eVerify API.

You need the **port** of your fingerprint scanner device. This is usually **4301** or **4302**.

With the **port**, your endpoint should look like this:
http://127.0.0.1:4301/capture.

The **deviceId** will be the **serial_number** of your fingerprint scanner device.

You can use **unix time stamp** for the **transactionId**.

The **captureTime** should be the current date and time.

You may now request to **http://127.0.0.1:4301/capture** with **CAPTURE** method.

Example Request (JSON)

```
{
  "env": "Production",
  "purpose": "Auth",
```

```
"specVersion": "0.9.5",
"timeout": 10000,
"captureTime": "Mon, 12 Sep 2025 07:21:40 GMT",

}
```

The whole **response** object will be the value of **fingerprint** in verification API.
